

## Hamilton Undergraduate Research Scholarship 2009

The **Hamilton Undergraduate Research Scholarship** gives students the opportunity to spend 10 weeks during the summer months carrying out research in the **National Centre for Sensor Research (NCSR)**.

The NCSR is a large scale, multidisciplinary research centre focused on the science and applications of chemical sensors and biosensors. As part of its Education and Outreach Programme, the NCSR is offering **two** Hamilton Research Scholarships for undergraduate science and engineering students.

Hamilton projects are drawn from the broad range of research being carried out within the centre.

This scholarship will provide you with direct experience of laboratory research, where you will be an integrated member of a multi-disciplinary team. The programme aims to give you an opportunity to extend yourself intellectually, beyond the limits of your degree course and gain valuable experience for your future career. The successful student will receive a stipend of €300 per week.

### **How to apply:**

Scholarships are open to all science and engineering undergraduates from 3<sup>rd</sup> level Institutions. Please complete the application form, including your educational achievements to date, indicating which project you wish to carry out, and a **short statement** (1 page max) outlining why you wish to apply for the Hamilton Programme to: [aoife.white@dcu.ie](mailto:aoife.white@dcu.ie)

Application forms and project outlines can be found at [www.ncsr.ie/education/index.html](http://www.ncsr.ie/education/index.html)

Aoife White, Communications Officer  
National Centre for Sensor Research, Dublin City University, Dublin 9

Deadline for application is **Wednesday 22<sup>nd</sup> April 2009**
